SUMMARY

Frontend Developer with 2+ years of professional experience building multi-role web platforms with React, Next.js and TypeScript. At Kadnya, I develop the creator control panel, website builder, subscriptions, payments and role-based access for an Arabic platform where experts sell courses and digital products. Co-founder of Tredro, a wholesale distribution platform, where I built a company dashboard, a sales-rep app and a customer app and shipped them to web and Android with Capacitor. Experienced with bilingual Arabic/English (RTL) interfaces, real-time features and remote teams. Growing into full-stack, with junior-level working knowledge of Node.js and NestJS on the backend. Competitive programming background (1,500+ problems solved).

EXPERIENCE

Frontend Developer, Kadnya | Remote Jul 2025 – Present
Arabic all-in-one platform where experts and academies sell courses, sessions and digital products (Saudi market).

- Develop the creator control panel used to manage products, students, orders and invoices, using Next.js and TypeScript.
- Built the website builder that lets creators launch a branded personal site with their own logo, colors, fonts and pages.
- Implemented subscription plans, pricing and payment gateway integrations.
- Implemented role-based access control (Admin, Instructor, Student) within a micro-frontends architecture.
- Integrate frontend features with backend REST services in an Arabic-first, right-to-left (RTL) interface.

Co-founder & Frontend Developer, Tredro | Syria 2026 – Present
Wholesale distribution platform connecting distribution companies, field sales reps and supermarkets.

- Co-founded the product and shaped its scope through conversations with people in the distribution chain.
- Built all three applications: a company dashboard (reps, customers, products, orders, invoices, warehouses, permissions, KPI dashboards), a sales-rep app (daily routes, GPS check-in, invoicing, offline mode with sync) and a customer ordering app.
- Packaged the web apps as Android apps with Capacitor, shipping one codebase to browser and mobile.

Frontend Developer, Nebu | Remote (Malaysia) Jan 2025 – Jun 2025
Cloud account management and security platform for AWS and GCP.

- Built cloud account management and AI-powered compliance report features with Next.js, TypeScript and React Query, including real-time notifications.
- Owned an independent section of the product from implementation to delivery.

Frontend Developer Intern, Ulutech | Aleppo, Syria Jul 2023 – Dec 2023
• Worked on real-world web projects in a team, using a shared Git workflow.

PROJECTS

Suttor (Graduation Project): Next.js, Arabic RTL | suttor.vercel.app
Arabic platform for readers and writers: books library with category and author filters, reading progress and notes, an AI reading assistant, a timed quiz that verifies authors, and a management dashboard.

Belawaseet Admin Panel: Next.js, TypeScript, React Query, Firebase | panel.belawaseet.com
Arabic RTL admin dashboard for a property-rental platform with Firebase real-time chat and notifications.

SKILLS

Core: TypeScript, JavaScript, React, Next.js (App Router, SSR), HTML, CSS, Git, GitHub, GitLab
State & Data: TanStack Query (React Query), Redux Toolkit, Zustand, Axios, REST APIs
Forms & Validation: React Hook Form, Zod, Yup
UI: Tailwind CSS, shadcn/ui, Material UI (MUI), Framer Motion, responsive design
Architecture: Micro-frontends, role-based access control, internationalization (i18n: next-intl, i18next), RTL
Backend (junior): Node.js, NestJS, Express, MongoDB
Platforms: Firebase, Appwrite, Capacitor

EDUCATION

B.Sc. Information Engineering, University of Aleppo, Syria 2026

ACHIEVEMENTS

- 1,500+ algorithmic problems solved on Codeforces, AtCoder and CSES (C++). Codeforces: Recursive-Thinker
- Aleppo Collegiate Programming Contest 2022–2023: 10th individually in Aleppo; team ranked 6th in Aleppo and 22nd in Syria

LANGUAGES

Arabic (native) | English (professional: C1 reading, writing, listening; B2 speaking)
